Jitse Schol
Data Processing week 2

1. **Explain the difference between the == operator and the === operator.**
   The === operator checks whether the values are equal, but also whether their types are equal (which == does not do).

2. **Explain what a closure is. (Note that JavaScript programs use closures very often.)**
   A function that uses local scope bindings which can be referenced outside the function.

3. **Explain what higher order functions are.**
   Functions that operate by using other functions.
